Detailed Action

Claims 1-18 have been examined.

Claims 1-18 have been allowed.

Allowable Subject Matter

The following is an examiner's statement of reasons for allowance: Within independent claims 1, 7 and 13, the examiner deems the novel limitation to be, within the entirety of each claim, the network structure as claimed wherein a node both receives and sends error information for a time, followed by a time of not receiving information and a time of not sending information.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record on accompanying PTO 892 form and not relied upon is considered pertinent to applicant's disclosure. Specifically, Baldwin ('166) teaches a system wherein hub-to-hub communication implements similar protocols while the hub-to-node structure is as claimed, Bergman ('694) teaches a system wherein an error is propagated through a system and each node responds with a node status message, Bartfai ('367) teaches a system wherein a node disables communication after receiving an error until the node that supplies the error indicates that the error is resolved,

Chambers ('473) teaches an ordered network wherein when a node experiences an error the nodes further downstream time out and network activities are suspended while a re-linking operation is performed to remove the faulty node, and Christensen ('374) teaches a system wherein an indication of a pending failover event pauses bus activity and a trigger event following the failover resumes system activity
